

File Distribution and Security

Built-in high-speed file distribution tools eliminate hard drives and DVDs from the production workflow

- Distribute large files to partners, vendors, and business partners
- Maintain full file security while distributing files at maximum speed
- Enable partners to easily access and download specific file types and formats

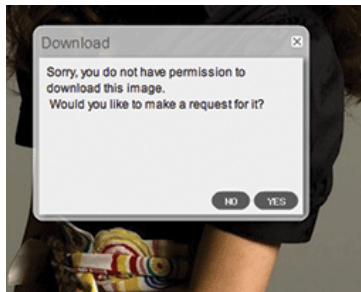

“We’ve been able to dramatically reduce the number of DVDs and drives that we ship and can deliver and receive files at high speed. Our work in progress and historical assets are now centralized and available to us at all times.”

Bret Moore, Director Print Production, New York & Company

IMAGE RIGHTS AND ACCESS REQUEST MANAGEMENT

Manage image rights and access request workflow

- Apply specific controls to assets and asset collections
- Approve or deny requests on the system using the Asset Requests Manager
- Set access expiration dates for any image or image collection using the Rights Editor
- Define restricted access behavior – low-res and high-res file availability and watermarking
- Determine download and watermark behavior for different users
- Maintain an ongoing history of image requests

ARCHIVE

Send hundreds of Gigabytes of content to disk with full metadata support – ideal for DAM integration and back workflow

- Archive jobs of any size
- Create precise and granular Archive Routes to organize content by rating, file type, and/or metadata
- Send Archives to any registered location on your storage network
- Full progress monitoring and reporting

REPORTS

Generate and share system activity and task reports

- Available activity reports include downloads, file uploads, contact sheet creation, custom generated images, talent approvals, metadata reports, archives, and user logins

LIGHTBOX MANAGER

Deliver large files and file collections for single click download

- Control access expiration, watermarking, and available file formats
- Track access and downloads for all Lightbox distributions
